The Making of Information Systems Karl E. Kurbel, 2008-04-24 Information systems (IS) are the backbone of any organization today, supporting all major business processes. This book deals with the question: how do these systems come

into existence? It gives a comprehensive coverage of managerial, methodological and technological aspects including: Management decisions before and during IS development, acquisition and implementation Project management Requirements engineering and design using UML Implementation, testing and customization Software architecture and platforms Tool support (CASE tools, IDEs, collaboration tools) The book takes into account that for most organizations today, inhouse development is only one of several options to obtain an IS. A good deal of IS development has moved to software vendors - be it domestic, offshore or multinational software firms. Since an increasing share of this work is done in Asia, Eastern Europe, Latin America and Africa, the making of information systems is discussed within a global context.

Does It Matter? Nicholas G. Carr, 2004-04-07 Over the last decade, and even since the bursting of the technology bubble, pundits, consultants, and thought leaders have argued that information technology provides the edge necessary for business success. IT expert Nicholas G. Carr offers a radically different view in this eloquent and explosive book. As IT's power and presence have grown, he argues, its strategic relevance has actually decreased. IT has been transformed from a source of advantage into a commoditized cost of doing business--with huge implications for business management. Expanding on Carr's seminal Harvard Business Review article that generated a storm of controversy, *Does IT Matter?* provides a truly compelling--and unsettling--account of IT's changing business role and its leveling influence on competition. Through astute analysis of historical and contemporary examples, Carr shows that the evolution of IT closely parallels that of earlier

technologies such as railroads and electric power. He goes on to lay out a new agenda for IT management, stressing cost control and risk management over innovation and investment. And he examines the broader implications for business strategy and organization as well as for the technology industry. A frame-changing statement on one of the most important business phenomena of our time, *Does IT Matter?* marks a crucial milestone in the debate about IT's future. An acclaimed business writer and thinker, Nicholas G. Carr is a former executive editor of the Harvard Business Review.

E-commerce Kenneth C. Laudon, Carol Guercio Traver, 2016 For undergraduate and graduate courses in business. *Understanding The Vast And Expanding Field of E-Commerce* Laudon's *E-Commerce 2016: Business, Technology, Society* emphasizes three driving forces behind the expanding field of e-commerce: technology change, business development, and social issues. A conceptual framework uses the templates of many modern-day companies to further demonstrate the differences and complexities in e-commerce today. An in-depth investigation of companies such as Uber, Pinterest, and Apple kick-off the course while preparing students for real-life scenarios. In the Twelfth Edition, Laudon and Traver add new or update existing case studies to match developments in the e-commerce field as they exist in today's tech world. They built in additional video cases for each chapter, making the material even more accessible to students as they prepare for their future roles in business.
